                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DISEASE: FACIOGENITAL DYSPLASIA (AARSKOG-SCOTT SYNDROME) IS A RARE MULTISYSTEMIC DISORDER CHARACTERIZED BY DISPROPORTIONATELY SHORT STATURE, AND BY FACIAL, SKEEFTAL, AND URGENITAL ANOMALIES.
SIMILARITY: CONTAINS 1 DEL-HOMOLOGY DOMAIN (DH).
SIMILARITY: CONTAINS 2 PH DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SUBCELLULAR LOCATION: CYPOLASMIC (BY SIMILARITY).

TISSUE SPECIFICITY: FFALL HEART, BRAIN, LUNG, KIDNEY, PLACENTA,
AND LESS IN LIVER; ADULT HEART, BRAIN, LUNG, SKELETAL MUSCLE, AND
LESS IN PAROREAS AND LIVER.
                                                                                                                                                                                                                                                                                                        MEDLINE-95042764; PubMed-7954831;

1- FUNCTION: TRANSFER OF ELECTRONS FROM NADH TO THE RESPIRATORY
CHAIN. THE IMMEDIATE ELECTRON ACCEPTOR FOR THE BUXZME IS BELIEVED
CHAIN. THE IMMEDIATE ELECTRON ACCEPTOR FOR THE BUXZME IS BELIEVED
TO BE UBIQUINONE. COMPONENT OF THE FLAVOPROTEIN-SULFUR (FP)
FRAGMENT OF THE ENZYME (BY SIMILARITY).

1- COPALATITE ACTIVITY: NADH + UBIQUINONE - NAD(+) + UBIQUINOL.

1- COPACTOR: 2FE-2S IRON-SULFUR CLUSTER N 1B (BY SIMILARITY).

1- SUBGNIT: COMPLEX I IS COMPOSED OF ABOUT 40 DIFFERENT SUBUNITS.
THIS IS A COMPONENT OF THE FLAVOPROPEIASMIC SIDE OF THE
MITOCHONDRIAL INNER MEMBRANE (BY SIMILARITY).

1- SIMILARITY: BELONGS TO THE COMPLEX I 24 KDA SUBUNIT FAMILY.

"Cloning of the human and murine interleukin-7 receptors:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          -i - FUNCTION: RECEPTOR FOR INTERLEUKIN-7.
-i - SUBUNIT: HETERODIMER OF AN ALPHA CHAIN AND A COMMON GAMMA CHAIN.
-i - SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
-i - TISSUE SPECIFICITY: SPLEEN; THYMUS; AND FETAL LIVER.
-i - SIMILARITY: BELONGS TO THE CYTOKINE FAMILY OF RECEPTORS.
-i - SIMILARITY: CONTAINS 1 FIBRONECTIN TYPE III-LIKE DOMAIN.

Derivatives of Escherichia coli heat labile enterotoxins useful as immunomodulators and for treating diarrhea and which do not bind the glycolipid receptor GM-1.

```
or may not be of Bordetella origin, can be used for the expression in Bordetella of enzymes, antiques, immunogens, allergens, enzyme inhibitors, hormones, lymphokines, immunogens, allergens, enzyme inhibitors, hormones, lymphokines, immunogens, allergens, enzyme inhibitors, hormones, lymphokines, immunogenila or their fragments, toxins, mammalian proteins, structural proteins or receptors. The Bordetella strains are particularly engineered to express the cholera toxin B subunit (this sequence). The promoters used in the constructs are selected from the Bordetella pertussis toxin subunit si leader (SI-L) and the pertussis toxin subunit SI leader (SI-L) and the pertussin pertactin cleader (PRN-L); and genes used in the constructs are selected from the cholera toxin B leader (CTB-L), the pertussis toxin subunit SI leader (SI-L) and the pertussin pertactin cleader (PRN-L); and genes used in the constructs are selected from a novel synthetic cholera toxin B gene (ctb) and the hmwl and hmw2
                                                                                                                                                                                                                                 Recombinant constructs comprising a promoter functional in Bordetella operatively linked to a heterologous gene or a non-Bordetella leader sequence for secretion of a gene product which may

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                           Composed of one A subunity control of the composed of one A subunity and five feet of one A subunity and five identical B subunits. The A subunit is responsible for toxicity, possessing adenosine diphosphate (ADP) ADP-ribosyltransferase activity, while the B subunits (EtxB and CtxB) activity, while the B subunits (EtxB and CtxB) activity of GM-I receptors. Although GM-I binding is responsible for some of the effects of Etx and Ctx, it has been found that certain effects of the toxins, such as immunomodulation, are not mediated through GM-I binding. The peptides of the invention are fragments of the beta-4-alpha-2 loop of EtxB and CtxB, exerting the same effects as normal EtxB and CtxB, such as nimmunomodulator or adjuvant. They may be used as an inhibitor for toxin-induced diarrhoea.

Therefore, the peptides may be used in the production of a composition of or treating, preventing and/or modulating a disease associated with an immune disorder and/or toxin-induced disease associated with an immune disorder and/or toxin-induced disease sasociated with an immune disorder and/or toxin-induced disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ;

A transgenic plant comprising or expressing a DNA sequence encoding an immunogenic agent can be be used as an oral vaccine for animals. The vaccine is administered by the oral consumption of the plant and provides the first known functional method for immunising animals
                                                                                                                                                                                                                                                                                                                                                                                               Transgenic plants contg. E. coli heat labile enterotoxin subunits used as oral vaccines for animals which consume the plant

using transgenic plants, where the plants express bacterial antigens that act as both immunogens and adjuvants. The method provides an inexpensive production and delivery system for such antigens to animals. This is the LT-B Escherichia coli toxin subunit and its coding sequence was used in the construction of such a transgenic plant. The immunogenic agent preferably comprises the LT-B or CT-B (cholera toxin B subunit) or optionally LT-A or CT-A.
                                                                                                                                   Gaps

certain amino acids (aa) were replaced with corresponding aa from heat-labile enterotoxin B subunit (LTB). The specific amino acid substitutions impart LTB-specific epitope characteristics to immunogenic mature CTB. The hybrid molecules have increased cross-reactivity and are suitable for a broad spectrum vaccine to protect against enterotoxigenic illness. Immunogenic proteins comprising the hybrid molecules can be used to treat, or in a vaccine to prevent, enterotoxin-induced illness, e.g. diarrhoea and vomiting, in humans and animals.

Note - This sequence does not appear in the specification, it is a claimed mutant sequence of mature cholera toxin B subunit (see AAW06605).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cholera toxin B subunit/heat labile enterotoxin B subunit hybrid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Heat-labile enterotoxin B sub-unit and cholera toxin B sub-unit hybrid protein - opt. fused to immunogenic sequence for use in vaccines against enterotoxin-induced illness
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Misc-difference 1..25

ö
AAW06607 is a mature cholera toxin B subunit (CTB)/heat labile enterotoxin B subunit (LTB) hybrid molecule. In mature CTB protein, certain amino acids (aa) were replaced with corresponding as from theat-labile enterotoxin B subunit (LTB). The specific amino acid substitutions impart LTB-specific epitope characteristics to immunogenic mature CTB. The hybrid molecules have increased cross-reactivity and are suitable for a broad spectrum vaccine to protect against enterotoxigenic illness. Immunogenic proteins comprising the hybrid molecules can be used to treat, or in a vaccine to prevent, enterotoxin-induced illness, e.g. diarrhoea and vomiting, in humans and animals.

C and vomiting, in humans and animals.

C and vomiting, in sequence does not appear in the specification, it is a claimed mutant sequence of mature cholera toxin B subunit (see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cholera toxin B subunit; nontoxic subunit; adjuvant; coadministration; antigen; bird; animal; mucosal; vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This is the amino acid sequence of the cholera toxin B subunit used in the method of the invention involving the use of nontoxic subunits as an effective adjuvant in coadministration of an antigen to birds and animals. In addition to the use of the toxin as am mucosal adjuvant, it also provides a vaccine comprising the toxin, an immunogenic amount of an antigen, and a pharmaceutically acceptable carrier. The toxin can be used with single/multiple vaccines, and it
                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New mutant cholera toxin selected from a group comprising nontoxic subunits/derivatives - effective as an adjuvant when coadministered with an antigen to birds and mammals
                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                             Length 103;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Amino acid sequence of the wild type chorela toxin B subunit.

AAW06605 is the full (including the signal peptide) length cholera toxin B subunit (CTB), this sequence is described as unpublished in the specification. The mature CTB protein was used to create hybrid mutants, in which certain amino acids (aa) of CTB were replaced with corresponding as from heat-labile enterotoxin B subunit (LTB), see AAW06605 and AAW06607. The specific amino acids substitutions impart LTB-specific epitope characteristics to immunogenic mature CTB. The hybrid molecules have increased cross-reactivity and are suitable for a broad spectrum vaccine to protect against enterotoxigenic lillness. Immunogenic proteins comprising the hybrid molecules can be used to treat, or in a vaccine to prevent, enterotoxin-induced illness, e.g. diarrhoea and vomiting, in humans and animals.
                Cholera toxin B subunit, used for hybrid immunogenic toxin production.
                                             Heat labile; tolerant; stable; hybrid; cholera toxin B subunit; CTB; heat labile enterotoxin B subunit; LTB; vaccine; immunisation; immunogen; antigen; broad spectrum; cross reactive; diarrhoea; comiting; food poisoning
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Heat-labile enterotoxin B sub-unit and cholera toxin B sub-unit hybrid protein - opt. fused to immunogenic sequence for use in vaccines against enterotoxin-induced illness
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 100.0%; Score 106; DB 17;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    In the patent, the DNA encoding LT-B is expressed as part of a fusion protein with an epitope of a malaria parasite, eg Region I or Region II or region of circumsporozoite protein antigen (CS) (AAP93560) from Plasmodium berghei. Pref. the fusion gene is inserted into attenuated Salmonella enteriditis under the left promoter control of lambda. Such bacteria can multiply in the host without causing disease adisorder and express CS that will induce a protective immune response multivalent.
                                                                                                                                                     B subunit of the heat-labile enterotoxin (LT-B) derived from E. coli.

                                                                                                                                                                                                                                                                      This is the amino acid sequence of Escherichia coli beta-subunit of heat labile enteritoxin (LTB). It is used in the method of the invention to create fusion proteins which are useful as vaccinating immunogens. The fusion proteins are useful in vaccines, specifically where the antigenic peptide is an inhibin fragment for increasing the fertility of an animal (by increasing levels of follicle stimulating hormone (FSH) or production of sperm or ova), but more generally for inducing an immune response against the antigenic peptide. Vaccines are particularly administered orally, e.g. fusion protein is expressed in edible plants or animals.

This synthetic Escherichia coli heat-labile toxin (LT) B subunit (LT-B) is encoded by a plant-codon optimized CDNA. The CDNA sequence contains plant-preferred codons and eliminates sequence motific associated with spurious mRNA processing. The second codon is changed from AAT encoding Asn to GTG encoding Val, in order to create a NcoI restriction site at the 5' end. Novel polynucleotides encode a mutant LT-A polypeptide or a mutant Vibrio cholerae cholera toxin (CT) A subunit (CT-A) polypeptide or a which have reduced enzyma activity as compared to the wild-type LT-A or polypeptide and where at least one of the codons is altered to a coll and preferred codon. The polynucleotide further comprises a nucleic acid sequence encoding LT B subunit (LT-B) or a CT B subunit (CT-B). The polynucleotides are useful for the transformation of plant cells for the polynucleotides in transgenic plants to produce edible vaccines, especially cral vaccines in transgenic plants for the prophylactic or therapeutic treatment against E. coli or V. cholerae. The mutant polypeptides are
                                                                                                                                                                                                                                                                                                                                                                                                                                                     New polynucleotides encoding LT-A or CT-A polypeptides for the transformation of plant cells, useful in immunogenic compositions to elicit immune responses in animals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                   The surface M protein of Group A streptococi is the major virulence factor and protective antigen of these organisms. However, there are a tremendous number of M protein serotypes. The invention provides recombinant M protein antigens comprising a gene encoding a carrier protein and an NH2 or COOH terminal M protein fragment carrying one or more epitcopes. The carrier may be the B subunit of E.coll labile toxin (LT-B). The carrier and the antigen may be linked by a linker, eg AAR50226. The LT-B-M24 fusion gene of the example was expressed using E.coll. The M24 component constists of a pair of synthetic oligos which copied the first 36 bp of the emm 24 gene. Rabbits immunised with the LT-B-W24 developed type-specific bacteriocidal antibodies against type 24 streptococci.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The sequence is produced by genetically fusing the leader sequence for E.coli heat-labile enterotoxin subunit (LTB) by its 3' SacI end to the 5' Ndel end of the chollera toxin subunit (CTB) via a syntheter linker. This allows the use of a strategically placed EcoRI site just upstream of the RBS on the LTB gene for the insertion of a strong tac promoter for the expression of CTB. The protein can be used as vaccines, cholera and receptor-blocking agents for prophylaxis.of cholera and E.coli diarrhoea
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

A desired truncated gene is cut out from a plasmid in which the gD or gB gene (opt. lacking a transmembrane domain, full details not given for this sequence) of HSV-1 strain Miyama has been cloned. It can also be chemically synthesised.

An appropriated linker is added to it as needed, followed by construction of a fused gene in which an LTB gene is linked to the 3' end. The resulting fused protein gene is ligated downstream from a promoter in an expression vector.

The product is effecient for targetting to nasal mucosa tissues compared to unfused proteins. It can induce an immune response. The protein is useful as immunogen in vaccines for therapeutic and bacterial infections.
                                                                                                                                                                     Fused protein used to treat viral and pathogenic bacterial infections - contg. heat labile enterotoxin B sub-unit and herpes-simplex virus antigen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       100.0%; Score 106; DB 12;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to breaking self-tolerance against self protein in a mammal that comprises administering a fusion protein for eliciting an immune response, the fusion protein comprising pentamers of Escherichia coll labile toxin subunit B (ITB) and carboxy terminal peptide (CTP) of human chorionic gonadotrophin (hCG). The fusion protein can also be used in a method of inducing antibody against protein in a mammal. The methods can be used to break self-tolerance and can produce antibodies to hCG. They can be used for prophylaxis and therapy, e.g. in the treatment of cancers or control of mammalian fertility. The method circumvents the chemical variability, complex preparation, side effects, and expense of other vaccines to break self tolerance that rely on passive immunisation, chemical conjugation with additional adjuvant, or lymphokine supplementation. The present sequence represents a LTB-CTP fusion
                                                                                                                                                                                                                                                                                                                                                           Breaking self-tolerance against self protein - using fusion proteins producing pentamers of Escherichia coli labile toxin subunit B and human chorionic gonadotrophin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

Both Etx and Ctx are composed of one A subunit and five identical B subunits. The A subunit is responsible for toxicity, possessing adenosine diphosphate (ADP) ADP-ribosyltransferase activity, while the B subunits (EtxB and CtxB) facilitate the entry of subunit A into the host cell via the binding and cross-linking of GM-1 receptors. Although GM-1 binding is responsible for some of the effects of Etx and Ctx, it has been found that certain effects of the toxins, such as immunomodulation, are not mediated through GM-1 binding. The peptides of the invention are fragments of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to peptide fragments of the Escherichia coli heat
                                                                                                 The inventors claim vaccines against cholera and heat-labile E.coli toxin contg. cholera toxin fragment coupled to carrier. The toxin is esp. the fragments defined in FT, above.

beta-4- alpha-2 loop of EtxB and/or CtxB, exerting the same effects as normal EtxB and CtxB subunits, except that they do not bind or cross link GM-1. They may be used in medicine as an immunomodulator or adjuvant. They may also be used as an inhibitor for toxin-induced diarrhoea. Therefore, the peptides may be used in the production of a composition for treating, preventing and/or modulating a disease associated with an immune disorder and/or toxin-induced diarrhoea. Sequences AAY87460-Y87463 represent preferred peptides of the invention, AAY87460 being particularly preferred.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ADP-ribosylating toxins, pertussis holotoxtin (PT), E. coli heat labile toxin (LT), and verotoxin-1 (VT). The structural information obtd. from these comparisons was used to identify stres which contribute to PT's biological activity. By modifying these sites the claimed PT mutants of the invention were produced, they can be used in the development of vaccines against Bordetella pertussis infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAR72540-R72545 are structurally equivalent B-subunits from three
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      with

Involving analysis of the 3-dimensional form of the crystalline involving analysis of the 3-dimensional form of the crystalline holotoxin. The pertussis holotoxin modification process comprises: holotoxin. The pertussis holotoxin modification acid (aa) residue of the holotoxin for modification by analysing the 3-dimensional form of the crystalline holotoxin, in relation to known information of the protein structure and function; (2) effecting mutagenesis (by removing or replacing a nucleotide sequence encoding at least one (aa)) of a tox operon; and (3) expressing mutant tox box in a Bordetella organism to produce the modified holotoxin. This method is used for modifying pertussis holotoxin, by studying its 3-dimensional crystalline structure of the pertussis holotoxin, functional (aa) which affect bological properties of the pertussis holotoxin can be identified. This can be used to predict (aa) which affect bological properties of the pertussis holotoxin can be identified. This can be used to predict (aa) which affect bologicals properties of the pertussis holotoxin. The present sequence represents an ADP-ribosylating toxin and a production of the present sequence represents an ADP-ribosylating toxin a production of the present sequence represents an ADP-ribosylating toxin a production of the present sequence represents an ADP-ribosylating toxin a production of the present sequence represents an ADP-ribosylating toxin a production of the present sequence represents an ADP-ribosylating toxin a production of the present sequence represents an ADP-ribosylating toxin a production of the present sequence represents an ADP-ribosylating toxin a production of the present sequence represents an ADP-ribosylating toxin a production of the present sequence represents an ADP-ribosylating toxin a production of the present sequence represents an ADP-ribosylating toxin a production of the present sequence represents an ADP-ribosylating toxin a production of the present sequence represents and a production of the present sequ

The invention relates to methods of preparing a pertussis holotoxin (PT)
having a modified blological activity. One method comprises identifying
at least 1 site in a PT that interacts with a molecule that is capable of
comming a complex with the holotoxin and which molecule is an effector
molecule which is an adenine nucleotide and which site contributes to
controlly, cell binding or enzymatic activity of PT. The functional
interacting site(s) are identified by analysing the three dimensional
structure of crystalline PT, determined by X-ray crystallogaphy. The
identified interacting site(s) are modified to alter toxicity, cell
conting or enzyme activity of the PT. The methods can be used to alter a
blological activity such as toxicity, enzymatic activity, mitogenicity,
cell binding and adjuvanticity of the PT. The three-dimensional structure
of PT have functional and/or structural resemblance to other bacterial
toxins such as diphtheria toxin (DT), pseudomonas exotoxin A (ETA), the
heat-labile toxin of E. coli (LT) and verotoxin-1 (VT). The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               oţ

The present invention provides a method for producing a pertussis toxin (also designated lymphocytosis-promoting factor, histamine-sensitising factor and islet activating protein) with a modified biological activity, involving analysing the crystal structure of the protein to identify active sites which can then be modified. This may lead to an alteration in the toxicity, cell binding or enzyme activity of the toxin. This can be used in the production of immunoprotective analogues of pertussis toxin is the cause of whooping cough following infection
                                                                                                                                                                          Pertussis toxin; crystal structure; whooping cough; biological activity; lymphocytosis-promoting factor; histamine-sensitising factor;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Modifying pertussis holotoxin to produce detoxified PT analogs, comprising analyzing crystalline structure of toxin, to identify sites of toxicity, cell binding or enzyme activity of PT and modifying

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes a crystalline form of isolated pertuasis holotoxin, in which the molecules of pertussis toxin have a three dimensional structure represented in the specification, a three dimensional structure represented in the specification, complexed with a polysaccharide molecule capable of forming a complex with the holotoxin. The crystalline form of the pertussis holotoxin can be used in a comparison with other proteins which have functional resemblance to pertussis holotoxin with the aim of modifying other proteins. Identifying the unknown sites of toxicity by comparison with the three dimensional structure of pertussis holotoxin provides a technique for detoxification of toxins to produce useful immunogenic but non-toxic analogues. It can also be used as a primary standard to measure the quantity, purity or efficacy of less pure compositions containing pertussis toxin. Ay60340 to AAY60385 represent peptides used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

The present invention relates to recombinant exotoxin protein variants, affinity domain. The present sequence is one such protein variant. In the present invention the heat-lablie enterotoxin (LT) of Escherichia coli was used as an exotoxin. LT is a member of the ADP-ribosylating exotoxin (bARE) family. The protein variants are useful for selectively delivering nucleic acid encodes an antigen to which the immune response when the nucleic acid encodes an antigen to which the immune response is desired, expression of a protein in a subject, by administering a composition comprising the protein variant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to recombinant exotoxin protein variants, which comprise an exotoxin mucosal cell binding motif and a nucleic acid affinity domain. The present sequence is one such protein variant. In the present invention the heat-labile enterotoxin (LT) of Escherichia coll was used as an exotoxin. LT is a member of the ADP-ribosylating exotoxin
                                       Novel exotoxin protein variant useful as protein carrier for facilitating gene delivery, comprises a mucosal cell binding motif of an exotoxin and a nucleic acid affinity domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel exotoxin protein variant useful as protein carrier for facilitating gene delivery, comprises a mucosal cell binding motif of an exotoxin and a nucleic acid affinity domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Exotoxin mucosal cell binding motif; nucleic acid delivery; nucleic acid affinity domain; heat-labile enterotoxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Score 101; DB 22;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ő
                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to recombinant exotoxin protein variants, which comprise an exotoxin mucosal cell binding motif and a nucleic acid affinity domain. The present sequence is one such protein variant. In the present invention the heat-labile enterotoxin (LT) of Escherichia coli was used as an exotoxin. LT is a member of the ADP-ribosylating exotoxin (bARE) family. The protein variants are useful for selectively delivering nucleic acid to mucosal cells, for inducing an immune response when the nucleic acid encodes an antigen to which the immune response is desired, for selectively delivering a gene to a mucosal cell, and for achieving expression of a protein in a subject, by administering a composition
                                                                                                                                                                                                                                                                                                  Novel exotoxin protein variant useful as protein carrier for facilitating gene delivery, comprises a mucosal cell binding motif of an exotoxin and a nucleic acid affinity domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

```
(bARE) family. The protein variants are useful for selectively delivering nucleic acid to mucosal cells, for inducing an immune response when the nucleic acid encodes an antigen to which the immune response is desired, for selectively delivering a gene to a mucosal cell, and for achieving expression of a protein in a subject, by administering a composition comprising the protein variant.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 2, A Sequence 2, A Sequence 2, A Sequence 21, Sequence 21, Sequence 2, A Sequence 26, S

GENERAL INFORMATION:
APPLICANT: O'Brien, Timothy J.
APPLICANT: Tanimoto, Hirotosh,
TITLE OF INVENTION: TANG-15: An Extracellular Serine Protease Overexpressed in
TITLE OF INVENTION: Breast and Ovarian Carcinomas
TITLE OF INVENTION: Breast und Ovarian Carcinomas
TITLE OF INVENTION: Breast und Ovarian Carcinomas
CURRENT APPLICATION NUMBER: US/09/027,337B
CURRENT FILING DATE: 1998-02-20
NUMBER OF SEQ ID NOS: 13
SEQ ID NO 2
LENGTH: 855
                                                                                                                                                                                                                                                                                                                                                   CTHER INFORMATION: Amino acid sequence of TADG-15 encoded by nucleotides OTHER INFORMATION: 23 to 2589 of Sequence 1; Patent No. 5972616 US-09-027-337-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 2, Application US/08709784

Patent No. 6048701

CENERAL INFORMATION:
APPLICANT: The Johns Hopkins University
ITILE OF INVENTION: Antibody Detection of Mismatch Repair
TITLE OF INVENTION: Protein
NUMBER OF SEQUENCES:
